Re: GPE Coriolis mass flow meter model F1001

Mr. Lykin,

Based on review of the information you have provided for the GPE Coriolis mass flow meter model F1001, this unit has been determined to be acceptable for use in dairy processing facilities in the State of New York. This determination was made based on review of provided schematics, photographs of the unit and specifications of materials of fabrication including type of stainless steel and surface finish. The unit reviewed meets the requirements for sanitary design as required by the Pasteurized Milk Ordinance (PMO).

When supplying units they should be accompanied by documentation verifying the material of fabrication, the specification of the surface finish and specifications for proper chemicals to be used for cleaning the units.

It was a pleasure communicating with you during this review, if you need anything in the future please feel free to contact me.

Sincerely,

Christopher Hylkema
